DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

TITLE: DONATION & CAMPAIGN TRACKER

DOMAIN: AWS CLOUD COMPUTING

YEAR-SECTION: III YEAR – D4

NAME: PRANAB KUMAR SANTRA

REGNO: 44111130

GUIDE NAME: Ms. Kalaivani A

ABSTRACT

The Donation and Campaign Tracker is a cloud-based web application designed to help non-profit organizations manage fundraising campaigns, donor information, and contribution records in a centralized and organized manner. Many organizations rely on spreadsheets or manual methods to maintain donation details, monitor campaign targets, and prepare reports, which can make tracking and information management difficult as the number of campaigns and donors increases. The proposed system addresses these challenges by providing a single platform for managing campaigns, recording donations, monitoring fundraising progress, and maintaining a donor ledger.

The system enables administrators to create and manage fundraising campaigns by defining campaign details, fundraising targets, and deadlines. Donations can be recorded against specific campaigns along with relevant donor information. The application calculates and displays goal-versus-achieved metrics, allowing administrators to monitor campaign performance through a centralized dashboard. It also provides access to donation records and campaign-wise information for reporting and analysis.

The application is developed using Python and a web-based framework, with Amazon Web Services used to provide cloud infrastructure. Amazon EC2 is used to host the application, while Amazon RDS provides relational database storage for campaign, donor, and donation records.

Amazon S3 is used to store campaign-related files and supporting documents. Amazon SNS is integrated to provide notification services, including daily donation summaries and campaign-related alerts. These services demonstrate the practical use of cloud computing for managing organizational data and communication.

The proposed system aims to improve the efficiency, accessibility, and organization of fundraising information while reducing dependence on scattered manual records. By combining application-level management with cloud-based storage, database, hosting, and notification services, the Donation and Campaign Tracker provides a structured foundation for transparent campaign monitoring and effective donation management. The system can also be extended in the future with online payment integration, advanced analytics, role-based access, and automated report generation.

KEYWORDS: Donation Management, Campaign Management, Cloud Computing, AWS, Amazon EC2, Amazon RDS, Amazon S3, Amazon SNS, Django.
